

Monitor

machine potential failures and their severity

Online Monitoring Expert Guard Application

ONLINE VIBRATION MONITORING

Easier as never before

AUTOMATIC MACHINERY SURVEILLANCE

No knowledge needed, expert system does everything for you

Omega system is the expert which gives you information about significant issues on your machines and their severity. If you do not have vibration diagnostics department, then Omega gives you the great opportunity to know condition of your machines. But it can also be good assistant for your diagnostics guys.

WHAT DO YOU NEED TO USE OMEGA?

It is simple, you just need Adash online system A3716 or A3800 with Omega OPC server and Omega application for project setting.

A3716

16 channels online vibration monitoring system packed in industrial 19" rack. All 16 channels are measured fully simultaneously.

A3800

Compact size, scalable 4-16 channels online vibration monitoring system.

OMEGA SOFTWARE FROM ADASH

Just create a machinery layout of your factory.

Connect the sensors to appropriate measurement points and pair them with A3800 or A3716 online monitoring system and you are ready to monitor your machines 24/7.

THE BASIC MACHINE

The basic machine measurement setup is 5 accelerometers, 4 in radial and 1 in axial direction.

Vacation Resilients Viscolina Resilients Viscolina

THE BASIC GRAPH

This is the basic graph with machine condition information. The ISO 20816 is used for limit values, but user can set his own limit values.

The basic information is the trend of failure progress.

GOOD

Live - actual value

- **H** last hour average value
- D last day average value
- W last week average value
- $\boldsymbol{\mathsf{M}}$ last month average value

FAILURE TYPES

The failure severity graph is displayed for these failure types:

MISALIGNMENT

LOOSENESS

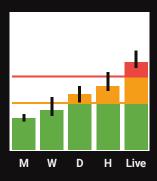

BEARING CONDITION

OTHER (UNKNOWN SOURCE)

SEVERITY TREND

THIS IS
THE UNBALANCE
SEVERITY TREND

What do we see on it?

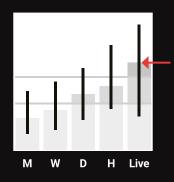

UNBALANCE LIMITS

You can see the limit values for warning and danger. The default limits are set according to ISO 20816 part 3. You can set your own user limits.

UNBALANCE MIN/MAX

You can see the vertical black lines. It displays maximum and minimum value, reached in every time interval M, W, D, H. Short line means stable values.

UNBALANCE UNSTABLE

Long lines means unstable fluctuating values.

Online Monitoring Expert Guard Application

Omega is created especially for factory control rooms where people monitor machinery pressures, temperatures and other process parameters. Along with these parameters you can display info about mechanical condition of your machines. Omega detects most common machinery faults and displays live and trend values in color bar indicators.

For more details contact your distributor or Adash directly. You can call us: +420 596 232 670, visit www.adash.com or send email to support@adash.cz. We are ready to help you.
